I receive an error message if trying to set a trap destination

Christoph Strauss - 2023-02-02 - Gecko

If you try to set a trap destination in your GECKO you might get an error message "invalid IP address".

This usually happens if you have updated your GECKO from firmware versions <02.3.x. The reason for this are the pre-populated fields with 0.0.0.0. The default values have been changed and as of 02.3.x the trap receiver IP address is empty by default. As a workaround you can delete all entries with 0.0.0.0 and then set your intended trap receiver IP.

If you start from factory defaults in v02.3.x this does not show up.

The screenshot shows the Hirschmann web interface for configuring Alarms (Traps). The left sidebar contains a navigation menu with categories like Basic Settings, Device Security, Time, Switching, Secure Remote Access, Diagnostics, and Advanced. The main content area is titled 'Alarms (Traps)' and includes a table for 'Destination Addresses' with columns for 'IP Address' and 'Trap Community'. The table contains 8 rows, all with '0.0.0.0' in the IP Address column. An error dialog box is overlaid on the table, displaying 'Error: Invalid IP Address' with a red 'X' icon and an 'OK' button. The interface also features 'Operation', 'Link Up/Down', 'Authentication', 'Spanning Tree', and 'LLDP' settings at the top.
