Is it possible to disable LTE and still have 2G as fallback when 3G fails?

- 2018-02-09 - OWL-LTE

No, you cannot disable LTE and still have 2G as fallback for 3G.

In menu Mobile WAN Configuration you can change the setting from "automatic" which offers LTE, 3G, 2G to a fixed setting of either 3G or 2G.

This means: selecting 3G fixes the mobile IF to 3G with NO fallback to 2G.
