

Why can I measure an impedance between DC power and chassis ground?

- 2024-09-19 - Products

All devices which do not have a galvanically insulated internal power supply - mainly these are RS and MS - have a built-in impedance to discharge capacities.

E. g.:

RS2-TX, MS20/30, MS4128: 3 MOhm

RS20/30: 5.3 MOhm

SPIDER II: 10 MOhm

RSP: OpenBAT: 20 MOhm

MSP: 40 MOhm

Note: the displayed values might vary slightly due to tolerances of the resistors.
