I want to migrate/load the configuration file from HiView 2.0 to HiView 3.0, how can this be done?

- 2018-02-09 - HiView

As HiView 3.0 supports more functions than version 2.0, the config files are not compatible. However there's a workaround:

You can open the hvw-file saved by HiView 2.0 in a text editor and copy everything between "<Devices>" and "</Devices>" into a blank HiView 3.0 configuration file saved before.

(replacing any present <Devices> section)

This file should be loadable by HiView 3.0 containing all devices saved in the HiView 2.0 configuration file.
