VPN with LANCOM Advanced VPN Client

- 2018-02-22 - HiSecOS

This lesson describes how to configure a VPN using Hirschmann EAGLE20/30 and the LANCOM Advanced VPN Client using x.509 certificates.

Software versions used: EAGLE20/30 firmware v02.0.01 Lancom Advanced VPN Client v3.00 Build 21499

Network plan

Install and start LANCOM Advanced VPN Client

The LANCOM Client with a 30 day evaluation period can be downloaded from

http://www.lancom-systems.de

After installation start the LANCOM VPN Client.

Import Certificates

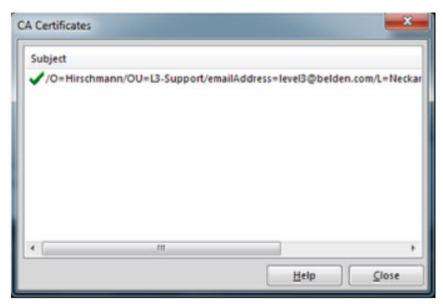

Organize • Include in library •	• Sł	are with - New folder		(EE -	- 08
	*	Name	Date modified	Туре	Size
Desktop	-	C cacert.pem	14.04.2015 15:38	PEM File	2
Documents		🥩 vpnclient-cert.p12	14.04.2015 15:47	Personal Information Exchange	4

Copy the PEM export of the CA (in our example **cacert.pem**) and the PKCS#12 export of the LANCOM Client certificate (in our example **vpnclient-cert.p12**) in the CaCerts directory:

C:\Program Files (x86)\LANCOM\Advanced VPN Client\CaCerts

Note: The file extension of the CA export must be **.pem** otherwise the LANCOM Client will not find the CA.

CA Certificates

To verify if the LANCOM Client could load the CA, select **Connection** -> **Certificates** -> **Display CA Certificates** from the menu.

The distinguished name of the CA should be displayed, marked with a green checkmark. Click **Close**.

Certificates Configuration

Select **Configuration -> Certificates** from the menu.

Certificate Selection

Highlight the Standard certificate configuration and click Edit.

Set the **PKCS#12 Filename** in our example C:\Program Files (x86)\LANCOM\Advanced VPN Client\CaCerts\vpnclient-cert.p12.

Click OK.

Close the **Certificates** configuration window.

Creating a new profile

- 1. Select from the menu **Configuration** -> **Profiles**
- 2. Click Add / Import to create a new profile
- 3. Select Link to Corporate Network Using IPsec
- 4. Click Next

Profile Name

ew Profile Wizard	×
Profile Name Enter the profile name of the connection	LANCOM Systems
The connection may be given a descriptive name, up characters long. Enter the name in the following fit	
EAGLE30_x509	
	Back Next > Cancel
<	Back Next > Cancel

Enter a **Profile Name** Click **Next**

Communication Medium

w Profile Wizard	×
Communication Medium Select the media type of the connect	ttion.
	he corporate network should be established. If the et the communication media to "modem" and then
Communication Media:	LAN (over IP)
	< Back Next > Cancel

Select LAN (over IP) as communication media Click Next

VPN Gateway Parameters

New Profil	le Wizard		×
VPN G To whi establi	ateway Parameters ch VPN gateway should the connec shed?	tion be	м
212.10 Using auther			the
88	55.1.2.2 Extended Authentication @AU User ID:	TH)	
	Password:	Password (confirm):	
		< Back Next > Car	ncel

Enter the **Gateway** to which the connection should be established. Could be an IP address or DynDNS name.

IPsec Configuration

	le Wizard	
IPsec Config	Configuration gure the basic IPsec parameters	LANCOM Systems
"auton In the	sic IPsec parameters can be specified here. Th natic mode" which are pre-defined (default) p event that uniquely defined IKE- / IPsec polici of and assigned using the policy editor under Exchange Mode:	roposals. es are to be used, these can then be

Navigate to Identities.

Select Standard certificate configuration.

Click **OK.**

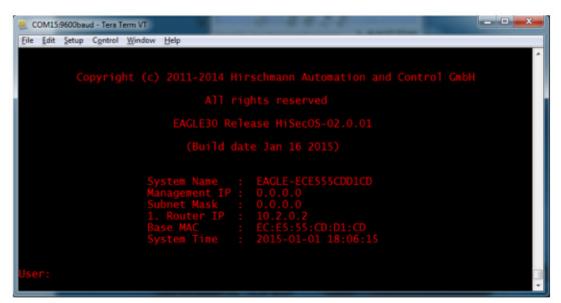

Click **Ok** to close the **Profile** Window.

LANCOM Client configured

The LANCOM Client configuration is finished

EAGLE20 Configuration

- 1. Set IP addresses of the router interfaces accordingly.
- In our example: Int1/3 10.2.0.2/24; Int1/4: 55.1.2.2/24
- 2. Switch the EAGLE30 into router mode

Starting from a default configuration the CLI commands to configure the device via serial connection are:

!*(EAGLE)>enable

!*(EAGLE)#configure

!*(EAGLE)(Config)#interface 1/3

!*(EAGLE)((Interface)1/3)#ip address primary 10.2.0.2 255.255.255.0

!*(EAGLE)((Interface)1/3)#ip routing

!*(EAGLE)((Interface)1/3)#exit

!*(EAGLE)(Config)#interface 1/4

!*(EAGLE)((Interface)1/4)#ip address primary 55.1.2.2 255.255.255.0

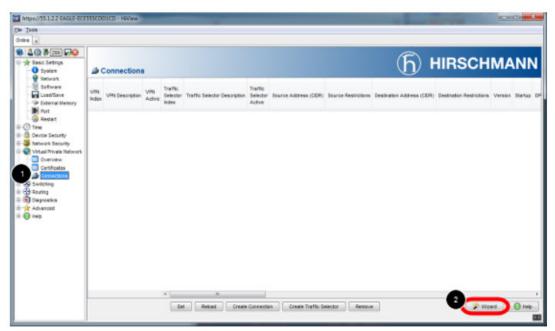

!*(EAGLE)((Interface)1/4)#ip routing

!*(EAGLE)((Interface)1/4)#exit

!*(EAGLE)(Config)#ip routing

3. Login to the webinterface of the EAGLE30 from the int1/3 (IP 10.2.0.2)

VPN Configuration Web Interface

- 1. Navigate in the web interface tree to **Virtual Private Network -> Connections**.
- 2. Open the Wizard

VPN - Basic Settings

1 Create or Select Entry 2 Authentication	VPN Index	VPN Descri	VPN Active	Authentication Type	Startup	Operational Status	Remote Host
2 Authentication 3 Endpoint and Traffic Selectors 4 Advanced Configuration	BINDER .		ALITE	1394		Contra	
	Create/Edit Index 1		LANCOMClient				

Specify the index and description of the VPN connection. Click Next

Upload Certificate/Key

Pre-sh	e Wizard ared Key on Secret fo	r Authentication		
be iden	tically conf	igured on both sides (ate value for the IKE ID d Key	to encrypt the connect /PN client and VPN gate according to the select C <u>o</u> nfirm Sec	ted ID type.
8	Local Ider Type: [D:	ASN1 Distinguish		upport/CN=VPNCLIENT
			< Back	Next > Cancel

- 1. Select **Certificate Bundle (PKCS12)** from the Authentication Method drop-down box.
- 2. Click on Upload certificate/key

3. Specify the location of PKCS12 file and passphrase. The passphrase of the test certificate

- is 'vpnclient'.
- 4. Click OK

Upload successful

If the certificate file was uploaded successfully you see a confirmation message. Click ok.

Select Local Certificate

Create or Select Entry Authentication	Authentication Type Method	Certificate Bundle (PKCS12)
Endpoint and Traffic Selectors Advanced Configuration	Pre-shared key (PSK) Pre-Shared Key Confirm Pre-Shared Key Certificate Certificate Certificate Authority	Choose
	Local Certificate Encrypted Private Passphrase (PKCS Confirm Passphras	Choose Choose
		K Cancel

Click **choose** and select the local certificate.

Uncheck Set/Change Passphrase

1 Create or Select Entry 2 Authentication	Authentication Type Method	Certificate	Bundle (PKCS12)
Endpoint and Traffic Selectors Advanced Configuration	Pre-shared key (PSK) Pre-Shared Key Confirm Pre-Shared Key		📝 Change
	Certificate Certificate Authority		Choose
	Local Certificate	EAGLE20-cert.p12	Choose
	Encrypted Private Key		Choose
	Passphrase (PKCS12) Confirm Passphrase		Set / Change
			Upload certificate/key
			2

- 1. uncheck Set/Change
- 2. click **Next**

Endpoint and Traffic Selectors

Create or Select Entry Authentication Endpoint and Traffic Selector:	Endpoints Specifies the hostname or IP address of the security	Endpoints Specifies the hostname or IP address of the security gateway.				
Advanced Configuration	Local Gateway	55.1.2.2				
	Remote Gateway	55.1.2.143

	Lifetime [s]	28800	
	PSec/Data-Exchange		
	Key agreement	modp1024	•
	Integrity (MAC)	hmacsha1	•
	Encryption	aes128	•
	Lifetime [s]	3600	

Set IKE Version 1 and specify the local and remote IDs (ASN1 DN of the certificates -see certindex.txt)

Version: **IKEv1**

IKE Local Identifier Type: id

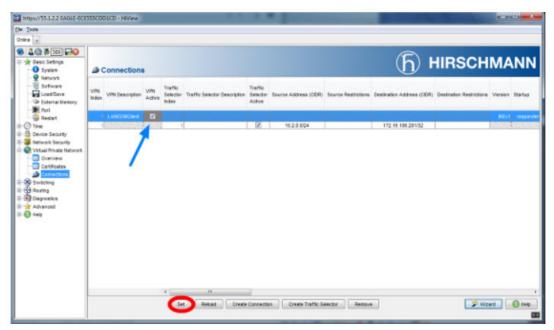

IKE Local ID: /C=DE/ST=BW/O=Hirschmann/OU=L3-Support/CN=EAGLE20

IKE Remote Identifier Type: id

IKE Remote ID: /C=DE/ST=BW/O=Hirschmann/OU=L3-Support/CN=VPNCLIENT

Click Finish

Activate the VPN Connection

Activate the VPN connection

Click Set

Initialize Tunnel Setup

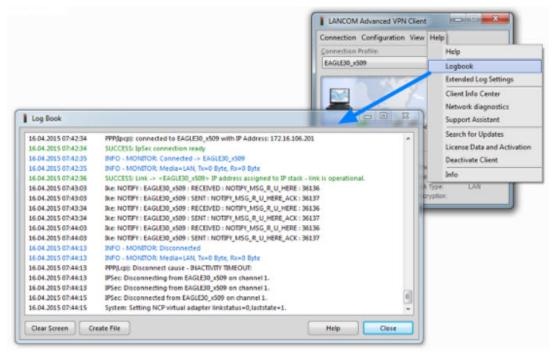

1. Move the Connection slide to the right to initialize the tunnel setup.

You will get prompted to enter the certificate's pin. In our example 'test'

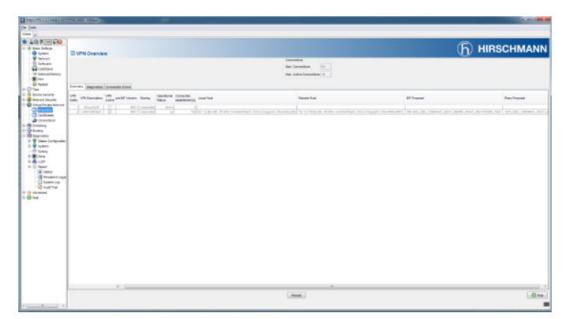

2. The connection should be established successfully.

LANCOM Advanced VPN Client - Log

Select Log -> Logbook

VPN Overview

In the EAGLE20/30 web interface navigate to **Virtual Private Network - Overview** to check if the VPN connection is up.
