Error message from 'Java Virtual Machine Launcher' displayed during installation of the bundled version or start of the portable version of HiView

Hendrik Lepple - 2022-05-03 - HiView

With HiView 04.2.00, users can get the following error message displayed when starting the installation of the bundled version or starting the portable version of HiView:

This happens quite often on newly installed PCs, or on machines with the 'N' versions of Microsoft Windows 10. This issue can be fixed by installing Microsoft Visual C++ Redistributable from the following link:

<https://docs.microsoft.com/en-US/cpp/windows/latest-supported-vc-redist?view=msvc-170>

In versions before HiView 4.2 we delivered this package if it was found missing on the target system. Since HiView 4.2 it was not included anymore and will be re-added in HiView 04.2.01 and later.
