

How to create a portable GUI

- 2018-02-09 - Industrial HiVision

More and more browsers are disabling Java support which makes the Applet GUI useless. As an alternative, a GUI-only installation can be performed. If no installation is allowed on the client customers can either use HiView or create a portable GUI for Industrial HiVision.

For creating the portable GUI follow these steps:

- Install Ind. HiVision on a PC (Windows or Linux, depending on the desired target system). Perform a GUI-only ("Client") installation
- Copy the installation folder ("Industrial HiVision XX") to a USB stick. This stick can be plugged into any client machine with a matching OS and the GUI ("bin/HiVision.exe") can be run from the stick.
